

Skirtings for Your
Perfect flooring

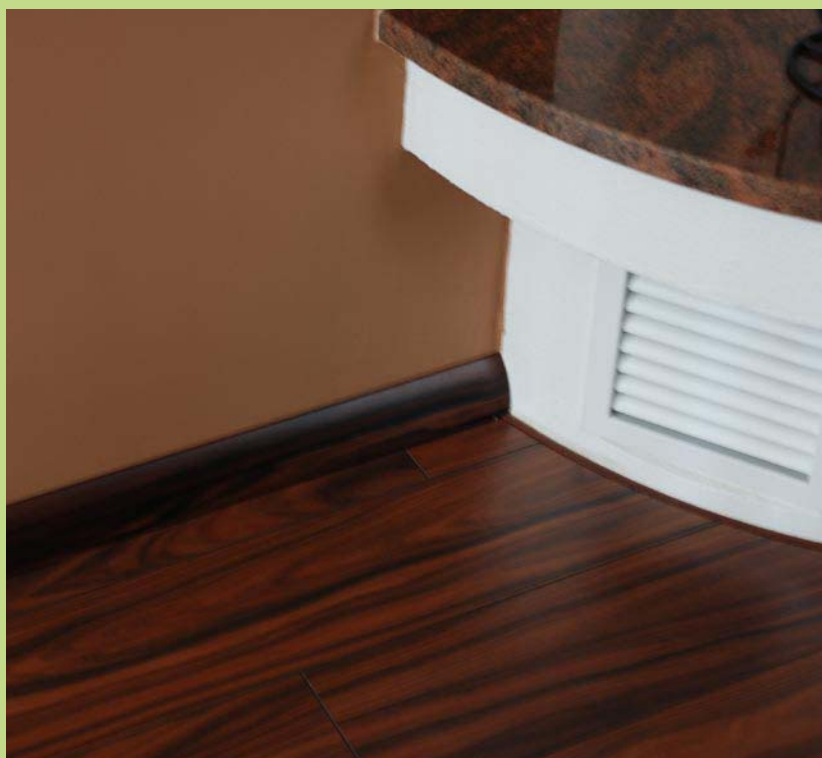

Silitan s.r.o.

www.silitan.sk

Company Silitan s.r.o. is a young dynamic company specialized on business with coated skirtings, profiles and accessories for laminate flooring. Offered wide range of goods in different decors imitating wood and other materials is intended not only for Slovakian market, but mostly for foreign customers.

The production uses modern fully automated technology. The quality of products is guaranteed by using high-quality basic wood material - MDF. Final appearance aesthetic is molded by decorative foils in wide range of patterns. Skirtings are wrapped in PE foil or in carton.

Skirtings are very important element, because they make parquet floor look perfect.

Their shape, gripping and decor affect floor quality and give the parquets stamp of perfection. Besides asthetic value they also have working value::

- cover the space between a floor and a wall - prevent area fouling,
- provide a space for different electric cables in interiors,
- right choice and usage of skirtings punctuates parts of space, molds its shape and line.

Silitan s.r.o.

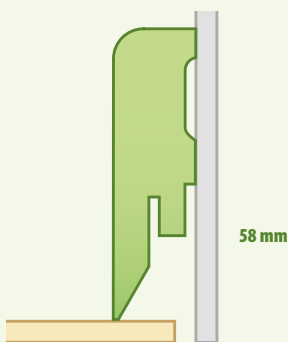

Skirtings KANT 58

... the touch
of future

Skirtings KANT 58

- produced in height of 58 mm
- assembly on hanging ABS clip
- dimension of skirting KANT 58: 58 x 16 x 2600 mm
- produced in wide range of most desirable and most modern decors
- pressed and lacquered elements are supplied with Skirtings KANT 58

Profile of KANT

Accessories

Skirtings WELT 60

- produced in height of 60 mm
- assembly on hanging ABS clip
- dimension of skirting WELT 60: 60 x 20 x 2600 mm
- produced in more than 50 decors – possibility to increase production with customers decors
- accessories WELT 60 – printed, unpainted, lacquered

Profile of WELT 60

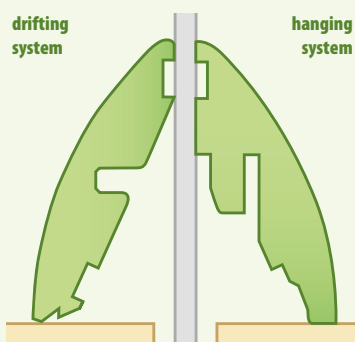

Skirtings WELT 40

... style by your feet

Skirtings WELT 40

- produced in height of 40 mm
- two types of skirtings WELT 40 Z and WELT 40 N are offered according to the assembly on hanging or drifting clip
- assembly of skirting with drifting clip is very tight, skirtings are fixated in 2 points
- dimension of skirting WELT 40: 40 x 20 x 2600 mm
- produced in more than 50 decors – possibility to increase production with customers decors
- accessories WELT – printed, unprinted, lacquered
- accessories WELT are universal, suitable for hanging as well as for drifting clip

Why skirtings WELT 40?

- elegant, round, emphasize exceptionality of floor
- underline every space
- they are lower alternative to the Skirtings WELT 60 for smaller areas
- suitable for laminated and wooden flooring
- perfect gripping of cables under skirting
- invisible gripping of skirting to the wall
- two possibilities of gripping
 - drifting or hanging ABS clip
- simple and quick assembly
- simple and quick disassembly by drifting system – only uncovering the skirting of the wall without its damage
- hold firmly by the wall even by assembly in uneven areas
- are flexible – can be assembled in larger bends
- modern profile – affordable

drifting and hanging ABS clip

Skirtings STEPP CLIP

... beauty in simplicity

Why skirtings STEPP CLIP?

- simple elegance
- modern technique of assembly
- invisible gripping to the wall
- possibility to hide cables under skirting
- simple and quick assembly and disassembly
- suitable for laminated and wooden flooring
- full-value support in accessories

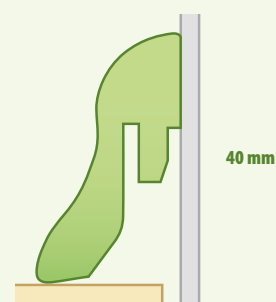

Accessories

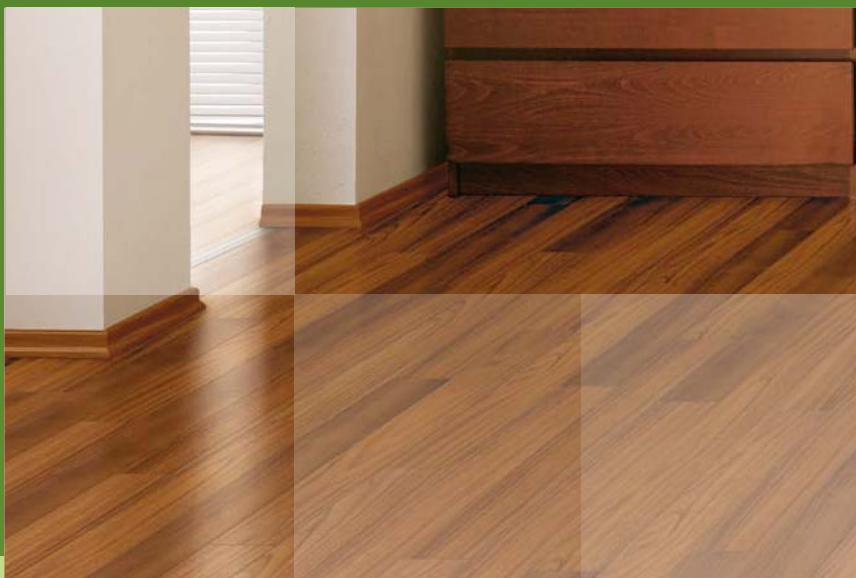

Skirtings STEPP CLIP

- produced in height of 40 mm
- profile classic-on clip
- dimensions of skirting STEPP CLIP: 40 x 20 x 2600 mm
- consists of skirting and hanging clip made of plastic
- hanging clip is supplied including screws and fasteners
- produced in 50 decors
- accessories STEPP CLIP – printed, unprinted, lacquered

Profile of STEPP CLIP

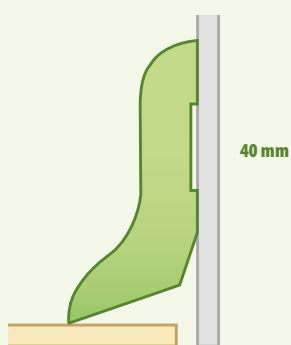

Skirting STEPP

... perfection of classic

Skirtings STEPP

- produced in height of 40 mm
- profile classic-screw
- dimensions of skirting STEPP: 40 x 20 x 2600 mm
- produced in 50 decors
- accessories STEPP – printed, unprinted, lacquered

Profile of STEPP

Accessories

Assembly

Drifting system

Assembly of Skirtings shown in particular steps

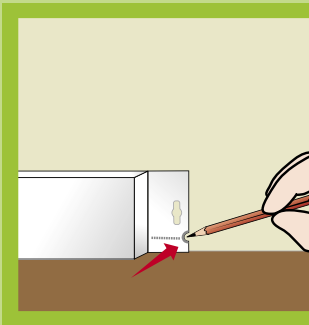

Step No. 1

There is a point clearly marked in exact height on paperboard packing of drifting clips, which can be used as a template to mark place for drilling gaps.

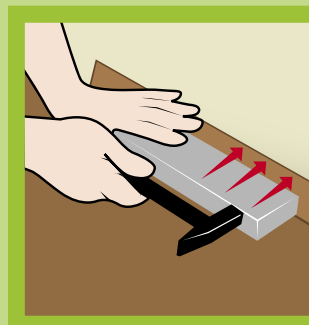

Step No. 4

Fit the end of skirting to the plastic element (corner, connector) and stepwise to the clips gripped in the wall.

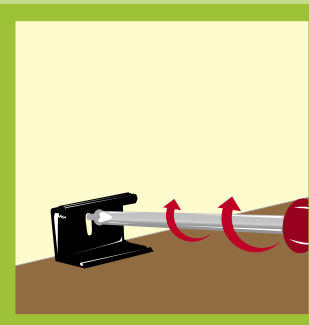

Step No. 2

Put the box to the wall, mark up the drilling point for fastener and the hole.

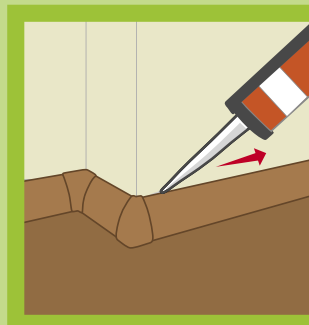

Step No. 5

By rubber hammer gently ram the skirting in the upper half of the height to the grooves on the clip. By ramming advance in the direction from the plastic element (corner, connector) to the other end of skirting

Step No. 3

Pin drifting clips in distance of 50 cm between each other into the wall in depths marked up by pattern. In case of uneven walls the distance might be even shorter. While joining skirtings the clip should be no more than 10 cm from the end of the skirting and no more than 10 cm from the beginning.

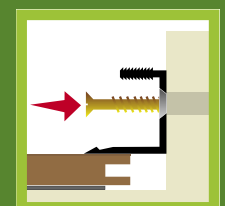

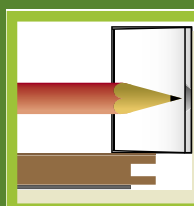

Step No. 6

By influence of unevenness of walls the skirting may not completely touch down the wall and slight spaces may incur. These can easily be filled with acrylic sealant.

Disassembly

In case of need to disassembly the skirting it is enough to gently lift the skirting off the wall with firm thin subject in the position of clips. The skirting will remain undamaged.

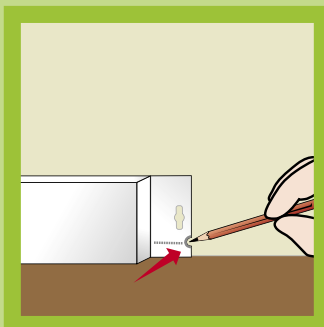

Recommended assembly method of clip to the wall for drifting system of skirtings.

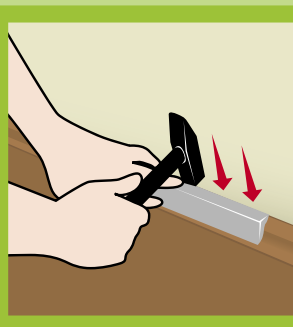

Assembly Hanging system

Assembly of Skintings shown in particular steps

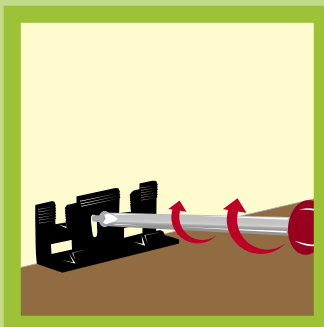

Step No. 1

There is a point clearly marked in exact height on pasteboard packing of caging clips, which can be used as a template to mark place for drilling gaps. Put the box to the wall, mark up the drilling point for fastener and drill the hole.

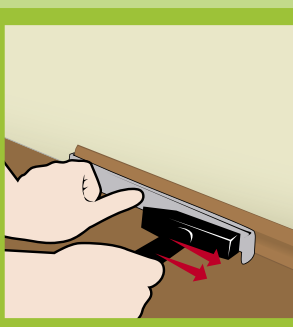

Step No. 4

Slipper the skirting in vertical way by rubber hammer.

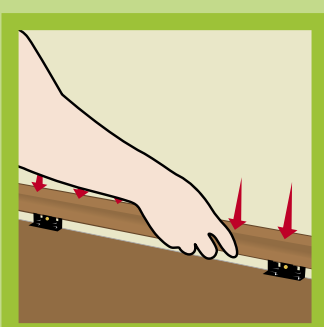

Step No. 2

Insert fasteners to the bored gaps in the wall approx. 50 cm away and with the screw fasten down the hanging clips to the wall. (In case of uneven walls we recommend to decrease the distance between particular clips). By linear extension of skintings place the clip the most 10 cm from the end of skirting and the most 10 cm from the beginning of another skirting.

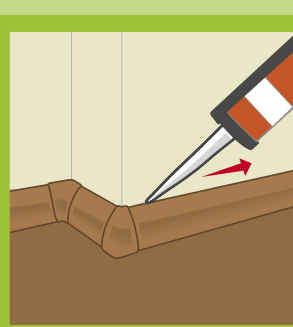

Step No. 5

Fix the skirting to adhere in horizontal way by a prod desk for flooring.

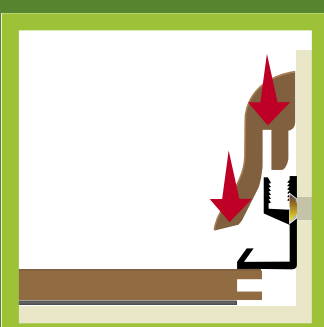

Step No. 3

Put the skirting on the fixed hanging clips as close as possible to the plastic accessory inner, outer corner or connector.

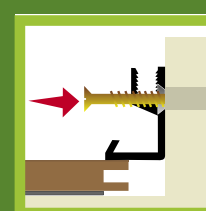

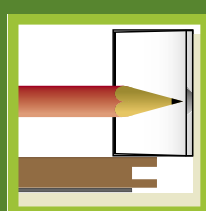

Step No. 6

By influence of unevenness of walls the skirting may not completely touch down the wall and slight spaces may incur. These can easily be filled with acrylic sealant.

Hanging system

Scheme of correct positioning of the clip to the wall and putting the skirting on the clip.

Recommended system of assembly of the clip to the wall for hanging system of skintings.
